

Invest in the first project of its kind... Renewable Parkway

Tech-Western, Inc. has initiated the process to convert the Northwest Parkway facilities to an environmentally sound operation functioning exclusively on solar power. Approximately thirty individual systems will be built across the Parkway at a total project cost of approximately ten million dollars. The Northwest Parkway will likely be the first entirely solar powered toll road facility in the Country. The project is approved and currently under way with on-site construction slated to begin in 2009.

Each photovoltaic system along the Parkway and the resulting Renewable Energy Credits generated by the system will be sold to individual investors. The investor will qualify for the recently renewed thirty percent Federal tax credit based on the purchase price of the system and will own marketable securities called Renewable Energy Credits which they may choose to hold or to remarket.

Tech-Western, Inc. is seeking progressive minded investors that would be willing to supply initial funds for a single solar site or multiple sites. Initial investment opportunities begin at approximately thirty thousand dollars up to the entire project amount of ten million dollars. Investment opportunities are limited.

The Renewable Energy Credits will entitle the owner to significant benefits:

- The marketing potential of an ownership position in an extremely high profile and visible project site,
- Clean green power to offset power produced by fossil fuels,
- An environmentally progressive investment project with the potential of a significant financial upside,
- The opportunity to invest in a project that is the first of its kind

Tech-Western, Inc. has been a leader in large complex industrial construction projects for over almost two decades and has millions of dollars in successful projects across the Country.

Northwest Parkway will be the first toll road in the USA to produce 100% of their electrical power from clean solar energy.

Northwest Parkway is Colorado's newest toll road that opened November 24th 2003. It connects with E-470 and I-25 at 157th Ave. The Parkway travels west and south to 96th Street.

At 96th Street, traveling south it turns into a local traffic 4-lane, 45 mph arterial allowing access to US 36, Interlocken Business Park and Flatiron Crossing Mall.

The Northwest Parkway Public Highway Authority is comprised of three member jurisdictions, the City and County of Broomfield, City of Lafayette, and Weld County. Ex-officio members are Jefferson County, City of Arvada, Regional Transportation District (RTD), Interlocken Metropolitan District, and the Colo. Dept. of Transportation (CDOT).

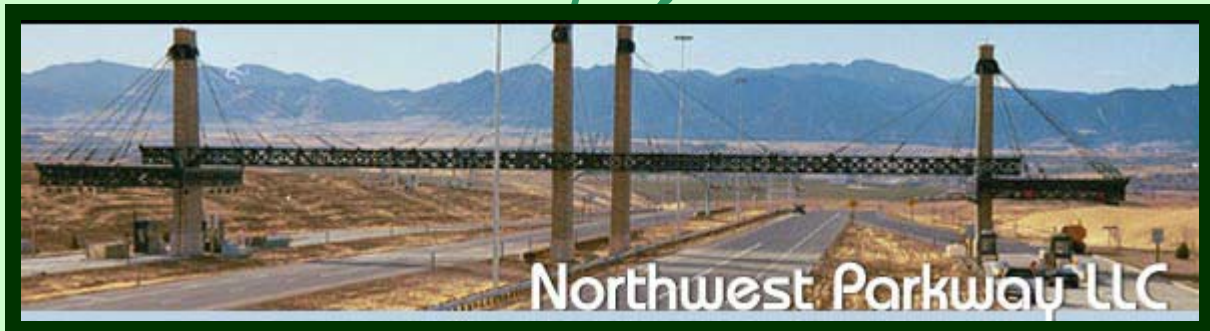

The Northwest Parkway PHA signed a concession agreement in November 2007, turning the rights to run and operate the Parkway over to the Northwest Parkway LLC
